# City of Santa Cruz **Desalination Feasibility Update Review**

Water Commission Presentation November 6, 2017

Prepared by Dudek In Collaboration with Kennedy/Jenks Consultants

- Purpose of review & planning context
- Report overview and conclusions
- Next steps

# **Purpose of Review & Planning Context**

#### Water Supply Advisory Committee (WSAC) Final Report on Agreements and Recommendations (Oct 2015) (excerpt,Table 16)

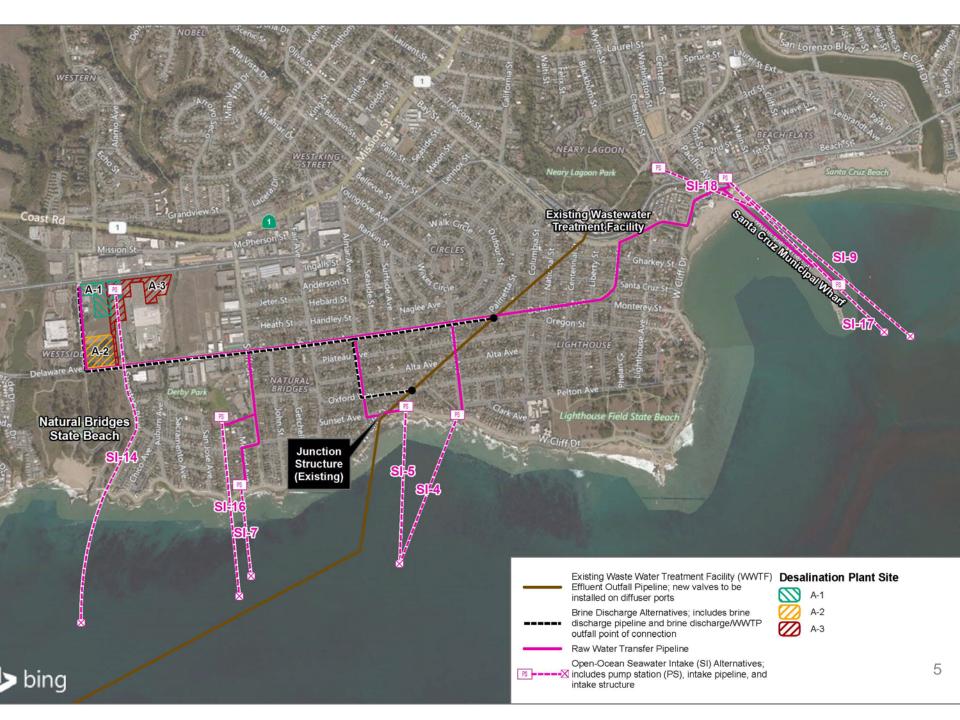

Advanced Treated Recycled Water or Desalination (Element 3)										
3.1M	Identify recycled water alternatives; increase understanding of recycled water (regulatory framework, feasibility, funding opportunities, public outreach and education)	c. 2016								
3.2D	Complete high level feasibility studies, as-needed demonstration testing, and conceptual level designs of alternatives; define CEQA processes; and continue public outreach and education. Select preferred Element 3.	c. 2017								
3.3D	Preliminary design, CEQA (including preparation of draft EIR), and apply for approvals and permits (except building permit).	c. 2020								
3.4M	Complete property acquisition, final design, complete CEQA and all permits.	c. 2022								
3.5W	Construction completed: plant start-up, water production begins	c. 2024								

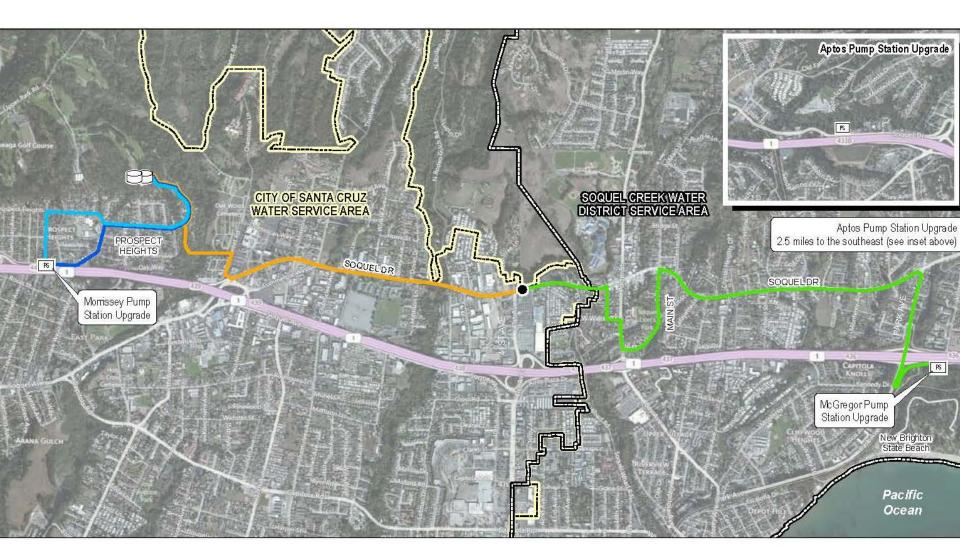

# **Report Contents**

- **1.** Introduction
- **2.** Assessment of Changed Conditions
- **3.** City Seawater Desalination Project Characteristics
- 4. CEQA/NEPA Compliance Approach
- 5. Permitting Approach
- 6. Timeliness of Implementation
- 7. Opportunities for Regional Collaboration
- 8. Conclusions

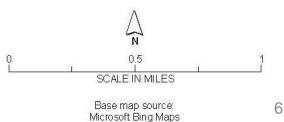

#### **Potable Water Pipeline Alignments**

- Morrissey PS to DeLaveaga Tanks Morrissey Alignment Option
- Morrissey PS to DeLaveaga Tanks Trevethan Alignment Option
- ----- DeLaveaga Tanks to City-District Intertie
- ----- City-District Intertie to McGregor PS

- DeLaveaga Tanks
- Pump Station (PS)
  - Intertie location at Soquel Dr

Soquel Creek Water District Service Area Boundary

City of Santa Cruz Water Service Area Boundary

- Change in Project Objectives Affects Project Size
  - scwd<sup>2</sup> project 2.5 mgd; joint project with SqCWD
  - City seawater desalination project 3.3 mgd; City-only project
  - Same plant-site location
- Reduction in Intake Pump Station Locations
  - scwd<sup>2</sup> project 8 intake alternative locations
  - City seawater desalination project 3 intake alternative locations

- 2016 Ocean Plan Amendment (OPA)
  - Substantial implications for seawater desalination projects
  - OPA is the basis for RWQCB Water Code Section 13142.5(b) determinations
  - Determination assesses best site, design, technology and mitigation alternatives to minimize mortality of all forms of marine life
  - Requires subsurface intake unless they are deemed infeasible
  - RWQCBs have not yet completed Water Code determination

- OPA Affects Seawater Intake
  - scwd<sup>2</sup> project open-ocean intake was selected approach
  - City seawater desalination project considers both openocean intake and subsurface radial collector wells
  - Additional study likely required to assess feasibility of radial collector wells
  - Pursue early consultation with RWQCB to confirm and clarify additional study
  - Marine Life Mortality Report required to quantify construction and operational impacts

- OPA Affects Brine Discharge Analysis
  - scwd<sup>2</sup> project dilution analysis showed brine dilution with City's WWTF would not prompt modification to existing NPDES permit
  - City seawater desalination project update dilution analysis required:
    - Project is slightly bigger (3.3 vs 2.5 mgd)
    - Water reuse projects may reduce WWTF effluent for dilution
  - Modelling/analysis must be conducted to estimate the degradation of all forms of marine life related to brine discharge

#### Approach to Update City Seawater Desalination Costs

Source costs from scwd<sup>2</sup>

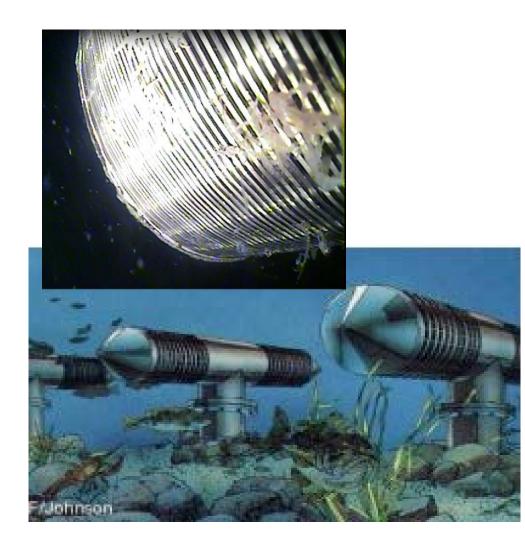

Adjust for changed elements

Adjust for increase to 3.3 mgd

Inflation from 2012 to 2017

### **Screened Open Water Intake System Changes**

scwd<sup>2</sup> based on 2-mm Intake screens

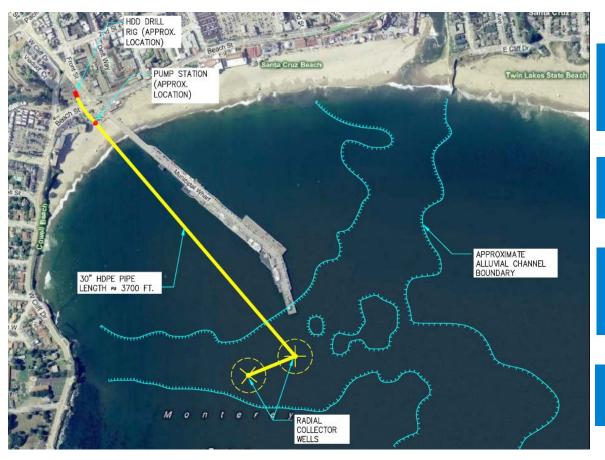

Coastal Commission now requires 1-mm intake screens

Required screen area doubles

Element cost doubles

# **Potential Subsurface Intake System**

OPA and Coastal Commission require evaluation of subsurface intakes

Subsurface intakes could provide a portion of the supply

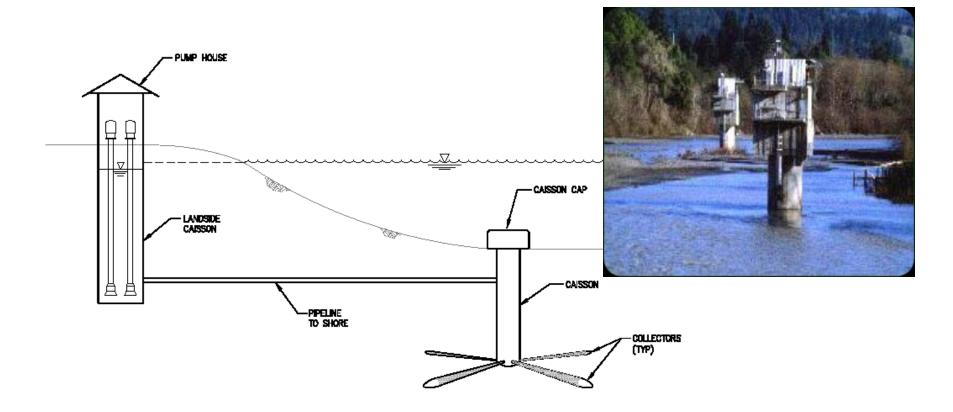

Subsurface intakes could have parallel screened open-ocean intake for portion of supply

Radial Collector Wells evaluated for scwd<sup>2</sup>

# **Potential Subsurface Intake System**

A radial collector well could potentially be built in offshore alluvial material

Challenges for Radial Collector Well System

Highly variable alluvial material

New concept in marine environment

Over twice the cost of screened open-ocean intake

Extensive testing to determine production capacity

#### Changes due to Increased Capacity: 2.5 to 3.3 mgd

Site and buildings already sized for 4.5 mgd

Processing equipment sized for 2.5 mgd

Only adjusted cost for appropriate items

Costs increase ~18% for ~32% capacity increase

DUDEK 17

### Comparison of Alternative 2 Costs from 2012 to 2017

SCWD Desal Project Element	2012 Source Document Costs	Adjusted for Inflation to 2017	
Desalination Facility Site and Buildings	\$3.47 M	\$3.47 M	\$4.09 M
Desalination Facility Treatment Processes	\$24.98 M	\$29.98 M	\$35.36 M
Screened Intake System	\$20.90 M	\$25.32 M	\$29.85 M
Brine Disposal	\$4.19 M	\$4.63 M	\$5.31 M
Electrical, Instrumentation, Misc. (25%)	\$13.38 M	\$15.85 M	\$18.65 M
Mobilization, Taxes, Bonds, OH&P (28.75%)	\$15.26 M	\$18.07 M	\$21.26 M
Contingency (35%)	\$23.43	\$27.74 M	\$32.64 M
Opinion of Probable Construction Cost	\$105.6 M	\$125.1 M	<b>\$147.2 M</b>

#### **Probable Construction Costs for 3 Desal Alternatives**

	Alternative 1	Alternative 2	Alternative 3				
Project Components (3.3 MGD Facility)	Screened Open-Ocean Intake (Westside)	Screened Open-Ocean Intake (Wharf Area)	Subsurface Intake System (Wharf Area)				
Seawater Intake and Conveyance System							
Open Ocean Intake <sup>1</sup>	\$60, 100, 000	\$58,900,000	\$52,800,000 \$76,600,000 \$77,800,000 \$10,500,000				
Radial Well Collectors	n/a	n/a	\$76,600,000				
Seawater Desalination Plant	\$77,800,000	\$77,800,000					
Brine Storage, Disposal, and Conveyance System	\$10,500,000	\$10,500,000	\$10,500,000				
Potable Water Distribution System Improvements	(Included in Desalination Plant costs)						
Total Capital Cost (\$)	\$148,400,000	\$147,200,000	\$217,700,000				
Estimated Capital Cost (\$mil)	\$148.4	\$147.2	\$217.7				
Annualized Capital Cost (\$mil/yr)	\$7.8	\$7.7	\$11.9				
Desalinated Water Produced (AFY)	3,696	3,696	3,696				
Annual Unit Capital Cost (\$/AF)	\$2,100	\$2,100	\$3,200				
Annual O&M Cost (\$mil/yr)	\$5.4	\$5.6	\$5.7				
Annual O&M Cost (\$/AF)	<b>\$</b> 1,470	<b>\$</b> 1,510	\$1,530				
Life Cycle Unit Cost (\$/AF)	\$3,570	\$3,610	\$4,730				
(\$/MG)	\$11,000	\$11,100	\$14,500				
(\$/CCF)	\$8.20	\$8.30	\$10.90				

Source: Appendix A.

Notes: AF = acre feet; AFY = acre feet per year; CCF = 100 cubic feet; MG = million gallons; n/a = not applicable

<sup>1</sup> Includes intake structure, screens, pipelines and pump station.

# **CEQA/NEPA Approach**

- Lead Agencies
  - CEQA = City of Santa Cruz
  - NEPA = Monterey Bay National Marine Sanctuary
- CEQA/NEPA Approach
  - Stand alone EIR and EIS vs Joint EIR/EIS
  - Meet with regulatory agencies early to assess need for and scope of additional marine studies

Water Supply Augmentation Strategy Implementation Plan	Q1 Q2 Q3 Q4	Q1 Q2 Q3 Q4 Q	Q1 Q2 Q3 Q4 Q1	Q2 Q3 Q4 Q1 Q2 Q3 Q4	4 Q1 Q2 Q3 Q4 Q1 Q2	2 Q3 Q4 Q1 Q2 Q3 Q4 Q1 Q2 Q3 Q4
---	-------------	---------------	----------------	----------------------	---------------------	---------------------------------

# Regional Opportunities

Santa Cruz County

18

CA

- Regional participation In City
  project
  - ✓ SqCWD, SVWD & SLVWD = 5.6 mgd

18

Capitola

- ✓ SqCWD only = 4.6 mgd
- Joint operational agreement could minimize need for capacity increase
- City participation In MBRWP

Monterey County

Watsonvi

# Conclusions

- City seawater desalination project can meet most WSAC objectives:
  - Fill identified supply-demand gap (1.2 bgy)
  - Meet the timeliness objective operational by 2025
  - Support system robustness, redundancy and adaptive flexibility
  - Be configured as a regional project
- Not yet known whether the Project would meet the costeffectiveness objective
- Subsequent analysis required to compare seawater desalination to other alternatives

# **Next Steps**

#### Figure 12 Gantt Chart Implementation Plan and Timeline

	Implementation Plan and Timeline														
	Node	Activity	Duration (years)	2016 Year 1 Q1 Q2 Q3 Q4	2017 Year 2 Q1 Q2 Q3 Q4	2018 Year 3 Q1 Q2 Q3 Q4	2019 Year 4 Q1 Q2 Q3 Q4	2020 Year 5 Q1 Q2 Q3 Q4	2021 Year 6 Q1 Q2 Q3 Q4	2022 Year7 Q1 Q2 Q3 Q4	2023 Year 8 Q1 Q2 Q3 Q4	2024 Year 9 Q1 Q2 Q3 Q4	2025 Year 10 Q1/2 Q3/4	2026 Year 11 Q1/2 Q3/4	2027 Year 12 Q1/2 Q3/4
	Element 1 - In lieu	Both near term with SqCWD using North Coast & lareger project with SqCWD & SVWD using	ng SLR water												
	1.1D	Near term: Develop Agreements, Complete CEQA, Resolve any Infra. Issues	0.5	1.1			<u> </u>								
	1.2M	Evaluate larger project(s) with other agencies; affirm return water volumes & water rights	3			1.	² <b>〉</b> _	<u>لم</u>	<u>ا</u>						
	1.3W/D	Completion of agreements, water rights, planning/prelim design, siting study & CEQA.	1					/	.3	r	L				
	1.4W	Infrastructure Improvements (see below for potential projects) & return water to SCWD	4								1.4			<u> </u>	
	1.5D/W	Assess performance	NA										1.	5	
	Element 2 - ASR (City, SqCWD and	l/or SVWD; i.e., Purisima & SM) + shared infrastructure (in lieu & ASR)													
	Phase 1 2.1M	Complete & use groundwater model	0.5-2												
	Higher-level Feasibility	Identify/select existing wells for potential pilot testing	0.25												
		Perform site specific injection capacity & geochemical analyses	0.5			L									
		Develop Pilot Program & identify potential sites for new ASR well(s)	0.75		2	12									
	Phase 2 2.2D	Retrofit existing wells	0.25			Í									
	Pilot Testing	Perform injection well hydraulic testing	0.25						~						
-		ISR cycle testing	1-2					2.	2						
strategy 1		Develop ASR program	1												
stra	Phase 3 2.3MW	Procure properties	1												
	Implementation	Design Project (includes City Administration)	1												
		CEQA	0.5								<u>لحر</u>				
		Construct	1.5							<	2.3				
	2.4D/W	Assess performance	2								Y		2.4		
	2.5W	Storage target achieved	NA												2.5
	Infrastructure Improvements for Lon	ng term in lieu and/or ASR													
		Design/build pipeline in Santa Cruz to Beltz Wells	1.5	٦											
		Tait Street Diversion Improvements	3												
		Graham Hill WTP Improvements	4	These ite	ms will be evaluated	along									
		Design & build Soquel Creek transfer (back), Scotts Valley transfer (to) infrastructure	2	2 with Elements 1 and 2 and implemented as needed.											
		Pump Station (Soquel to City)	1.5	Inplana	ited as needed.										
		Intertie No. 1 Pipeline (City to Scotts Valley)	2												
		Pump Station (City to Scotts Valley) Intertie No. 1	2												
	Element 3 - Advanced Treated Rec	ycled Water or Desalination			<u></u>										
	3.1M	Define Recycled Water project alternatives and status of DPR regulations	1	3

strategy 2	3.3D	Prelim design, CEQA (prepare Draft EIR), permits	3						3.3						
	3.4M	Complete Design , CEQA, permits, property acquistion	2								3.4				
		Complete construction/start up	2									1	3.5		
					•	•		÷					-	· · · · ·	

#### Table Notes & Select Assumptions

This table approximates activities, costs, durations and sequencing of each element, all of which are subject to change.

Elements are shown to start in Q1 - 2016. This may or may not occur depending upon agreements, contracts, etc.

Rehab/replacement of the Newell Creek Pipeline is part of the existing CIP and not shown here.

nensempacterism to the revene is cere repenties back on the sharing our and to shown index. Some infrastructure improvements may not be required for the prussing as successful. E.g., evaluation of Ranney collectors may substitute GHWTP Improvements. CEGA is used generically: implies compliance with California Entritoriamental Quality Act. Plot ASR work assumes major infrastructure not required. E.g., intertie to Scotts Valley or new well(s). Element 2 includes 8 wells for in leup is a dottional wells for ASR.

Legend

ASR = Aquifer Storage and Recovery CEQA = California Environmental Quality Act DDW = Division of Drinking Water DPR = Direct Potable Reuse EIR = Environmental Impact Report

GHWTP = Graham Hill Water Treatment Plant IPR = Indirect Potable Reuse ISR = Injection, Storage, Recovery SCWD = Santa Cruz Water Department SqCWD = Soquel Creek Water District SVWD = Scotts Valley Water District

△ Decision Node

Milestone Node

Some amount of water returned to SCWD

Full required amount of water returned to SCWD

### **Questions.**

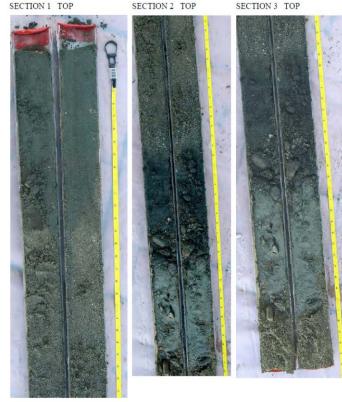

# **Backup Slides follow**

## The information we know includes:

- Physical characteristics of onshore SLR alluvial channel
- Variability and characteristics of onshore sediments
- Physical characteristics of offshore SLR alluvial channel
- Variability and hydraulic conductivity of offshore sediments 8-15 feet below seafloor from vibracores
- Mobile fine sediment layer at the seafloor

Section 1: 0 - 2.7 ft

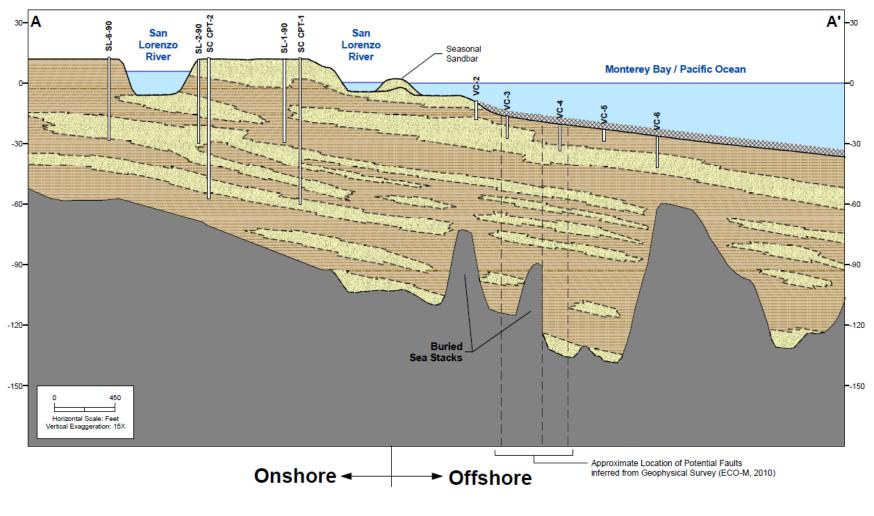

Section 3: 7.7 - 11.3 ft

DUDEK 27

Offshore VC-6: Silty sand and clay layer over medium sand

Section 2: 1.5 - 5.2 ft

# The offshore deeper sediments can be inferred from onshore data and local geologic conditions

DUDEK 28

# **New/Updated Studies**

- New biological records searches & terrestrial surveys
- Need for additional marine surveys to be determined
- Marine Life Mortality Report
- New cultural resources records searches, surveys and NA consultations
- New ambient noise measurements
- Update air quality and GHG analyses
- Other updates
